Designing LowCarbon FireSafe | innovaré simplifying offsite | Delivering LowRisk RapidBuild

Brindley Heath Academy

Education Sector- Case Study

Bowmer + Kirkland Photography

Designed by Pick Everard and delivered by Bowmer & Kirkland, Innovaré provided the full structural solution for the new Brindley Heath Academy on behalf of the Department for Education. The project replaced outdated school facilities with a new primary school designed to support the needs of pupils, staff, and the wider community.

Located in Kinver, Staffordshire, the new school provides 1,461m² of teaching accommodation within a purpose-built single-storey facility. The development brings together a range of learning spaces within a modern school environment designed to support daily teaching and learning.

Innovaré supplied its Full Structure Solution using our Low Carbon Fire Safe 384mm i-FAST panels. Manufactured offsite in a controlled factory environment, the system provides structural, thermal, acoustic and fire performance within a single panelised solution. The approach enabled a high level of pre-manufactured value and supported quality control throughout construction.

The project team worked within programme constraints while addressing site limitations, budget requirements, and sustainability objectives. Offsite manufacture reduced the volume of site-based construction activity and supported an efficient installation programme.

The external envelope incorporates StoFix brick slips and Benx CladColour HD cladding, creating a durable and low-maintenance finish aligned with the architectural design. Windows were supplied by Quest as part of the completed building envelope.

The completed school provides modern teaching accommodation for the local community and demonstrates how offsite construction can support the delivery of education buildings where programme certainty, quality and sustainability are key project requirements.

Project	Brindley Heath Academy
Client	Department for Education
Contractor	Bowmer & Kirkland
Architect	Pick Everard
Framework	CF21
Location	Kinver, Stourbridge
Innovaré Solution	Full Structure
Innovaré Product	384mm i-FAST
GIFA m²	1,461m²
Cladding	StoFix Brick Slips & Benx CladColour HD
Building	Single-Storey Primary School
